BMW Recycling.

Your BMW is the product of a comprehensive recycling concept. But what exactly does this mean in practice? It means that all the requirements of recycling are taken into account from the start, in the initial development of a BMW. One example is the choice of materials carefully selected to preserve resources and ensure efficient recycling compatible with the environment. Each BMW is designed and built for simple and economic recycling after its running life. We have been collecting the know-how required for this purpose ever since 1994 at the unique BMW Recycling and Dismantling Centre (RDC) near Munich. Please contact your BMW partner on all matters regarding the return of your end-of-life vehicle. He will be happy to advise.

¹ The figure specified includes a 90% tank filling plus 68 kg for the driver and 7 kg for luggage. Unladen weight applies to vehicles with standard equipment. Options and special equipment may increase this figure.

² Electronically limited.

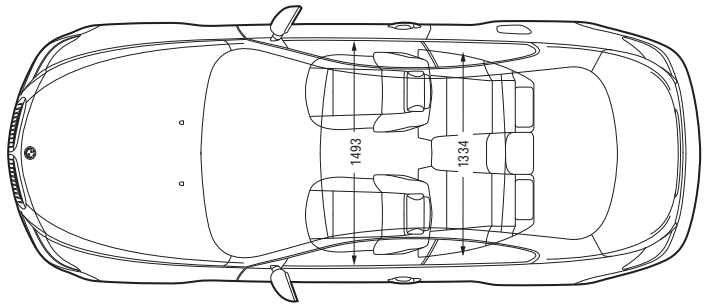

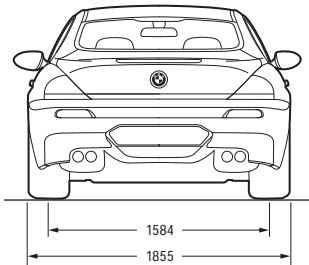

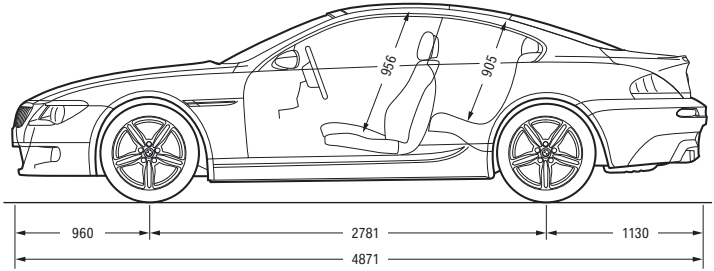

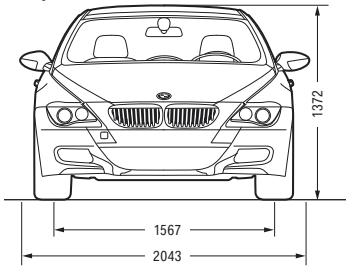

³ The engine of the BMW M6 Coupé and the BMW M6 Convertible is designed for RON 98 fuel. Use of RON 95 or 91 fuel reduces engine output.

⁴ The engine of the BMW M6 Coupé and the BMW M6 Convertible fulfils the EU4 emission standard. Fuel consumption is determined in the ECE driving cycle made up of approximately one-third urban and two-thirds overland driving (measured in terms of mileage covered). CO₂ emissions are measured in addition to fuel consumption. Optional equipment (such as wider tyres) can have a significant impact on fuel consumption.

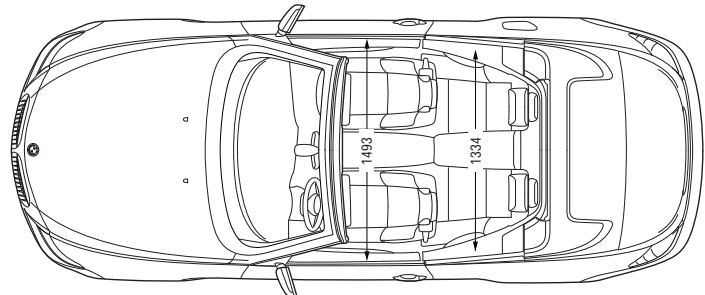

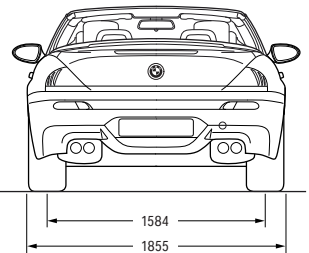

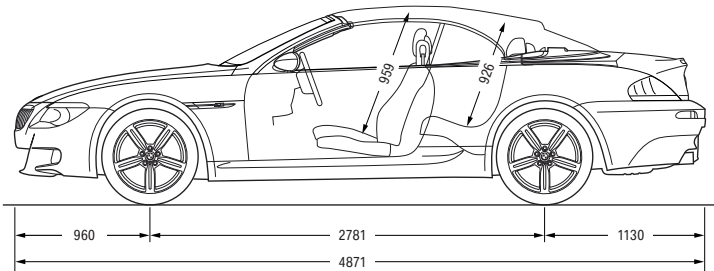

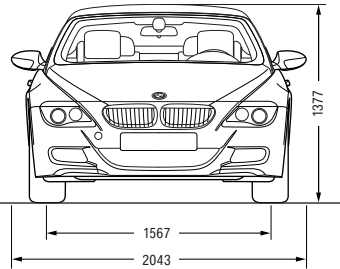

Optional extras are available fully installed straight from the factory. For additional extras see the extensive catalogue of accessories at your BMW partner. BMW Individual will be happy to help should you wish your dream BMW to include features not listed here. To find a package that perfectly suits what you have in mind, simply contact your BMW partner for assistance.
